Corpus Data & Image Analysis AB receives attention at the China Jiangsu Conference (CITTC) meeting for International Technology Transfer and Commercialization

Stockholm, Sweden, Corpus Data & Image Analysis AB, specializing in multivariate and hyper-spectral imaging and spectroscopy analysis attended the annual CITTC-meeting in Nanjing, China. Corpus was included in a Swedish delegation organized by Vinnova and representatives from Corpus, including COO Hans Grahn, Ph.D. attended.

Corpus met with several business partners and made new contacts in China. Among the participants attending the conference were delegates from Healthcare, the MedTech Industry and international investors. Also attendees from outside these categories were present. The conference provided opportunities for all parties to meet and discuss business ideas in the beautiful city of Nanjing.

The new platform for complex analysis of digital dermatology measurements DermaProbe™ created interest with attendees at the conference. "I am pleased with the connections we have made here in China." Says Hans Grahn COO of Corpus: "We see great sales opportunities in China for our products in digital dermatology- and diabetes induced neuropathy and are very much looking forward to establishing the company and our products on the Chinese market."

About Corpus

Corpus is a Swedish based company specializing in multivariate and hyper-spectral imaging and spectroscopy analysis. Corpus develops Multivariate- and Hyperspectral data-analysis methods for a wide array of imaging modalities. Corpus' customers can be found in both scientific rooms and in the manufacturing industry. CorpusDia.com

About DermaProbe™

DermaProbe™ has shown to be the most effective, affordable and reliable skin diagnostics tool in the industry. With such a wide array of uses it is sure to be bridging the chasm in the skin diagnostics field. "The advancement of Corpus' new platform will solve many difficult tasks in the diagnostic skin area" says Gunilla Nordström, CEO of Corpus. We have already received great interest from the MedTech industry and also from End-Users. "
